

SPACEMAN DAN'S FUN SHEET

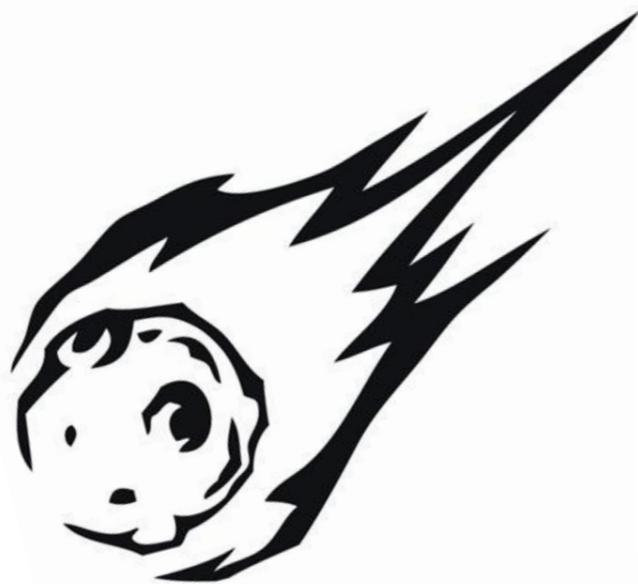

Lunar Lee is observing some shooting stars! Read his fun facts, then add some colour!

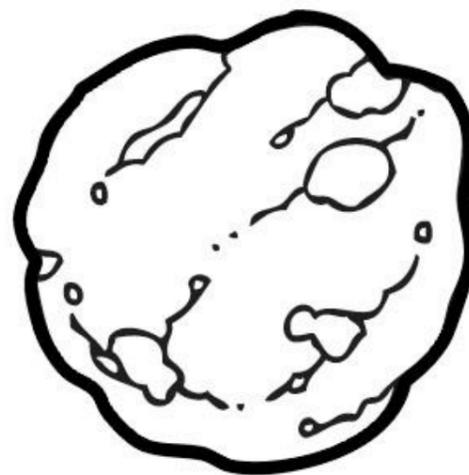

- Shooting stars are actually meteors entering the Earth's atmosphere.
- As the meteor reaches extremely high speeds it burns up leaving a glowing trail.

Can you help Spaceman Dan identify which picture is of an asteroid, which is a meteor and which is a comet? Then colour them in!

What is this?

What is this?

What is this?

Photon Frankie has set you a challenge! Can you unscramble the following words? She has done the first one for you!

EMORET

METEOR

GRTYAIV

SERTIDAO

FLBIREAL

TCMEO

MICPAT

OOTINSHG ARTS
